## IN THE CLAIMS

Please amend the claims as follows:

(Currently Amended) A radiation patch equipped in a planar inverted F
antenna for radiating applied signals, wherein the radiation patch has an asymmetrical <u>rectangular</u>
shape resembling a linearly tapered rectangle <u>having a triangle-shaped cutting edge</u> and a length
and width of tapered sides of the radiation patch is determined according to a desired resonant
frequency.

## (Cancelled)

- (Currently Amended) A planar inverted F antenna having a radiation patch, comprising:
  - a ground means for grounding a radiation patch:
  - a short means for shorting the radiation patch;
  - a feeding means for supplying an electric power to the radiation patch; and
  - a radiation patch for radiating electric power from the feeding means.
- wherein the radiation patch has a <u>rectangular</u> shape resembling a <u>linearly tapered</u> reetangle <u>having a triangle-shaped cutting edge</u> and a length and width of tapered sides of the radiation patch is determined according to a resonant frequency.
- 4. (Previously Amended) The planar inverted F antenna having a radiation patch as recited in claim 3, wherein a width of the short means is varied according to a desired resonant frequency.
- (Previously Amended) The planar inverted F antenna having a radiation patch as recited in claim 3, wherein a location of the feeding means is varied according to the desired resonated frequency.
